

Par ailleurs, BTCL et Hutchinson ont au cœur de leurs préoccupations le maintien des emplois. Ce projet permettra de former du personnel hautement qualifié dans ce domaine, permettant ainsi de maintenir des emplois et d'en créer de nouveaux au Québec et au Canada. En outre, les notions de pièce à valeur ajoutée ou de différenciation (dans le cas présent le traitement acoustique) sont très importantes afin de se démarquer des pièces qui peuvent être facilement fabriquées dans des « Best Cost Countries ». Ce développement technologique permettra de faire rayonner le Québec et le Canada dans le domaine aérospatial et de potentiellement générer des contrats pour des entreprises québécoises.

Figure 4. Taxi urbain NEXUS de BTCL.

Figure 5. Taxi urbain CityAirbus de Airbus.
